

SmartFeeder

Automated Feeding & Fasting for Rodent Cages

- Less time in the lab
- Fewer manual feeding tasks
- Improved protocol compliance
- Full feeding history without extra effort
- Works with your existing cages

About SmartFeeder

SmartFeeder is a simple add-on for standard rodent cages that automates feeding and fasting schedules. It helps ensure protocols are followed consistently, reduces manual intervention, and provides a complete feeding history you can review remotely, anytime you need it.

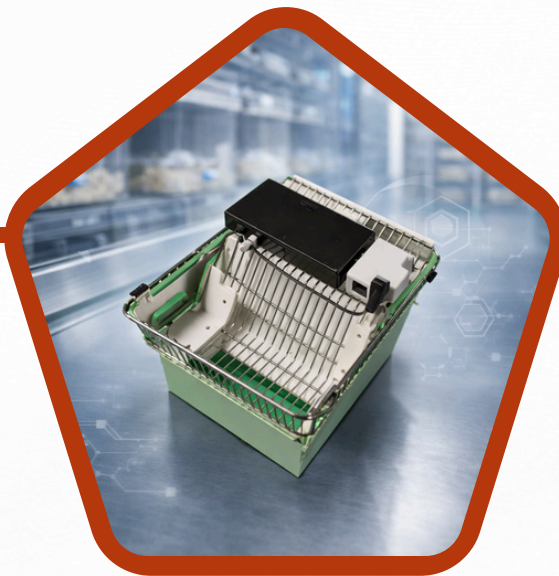

- **No cage redesign.**
- **No rack replacement.**
- **No disruption to existing workflows.**

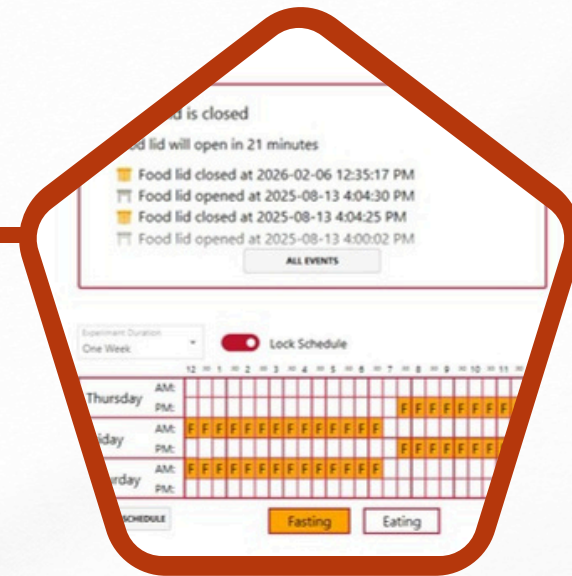

ADD-ON FOR EXISTING CAGES

CageView™ Family

About the CageView Platform

The CageView family is a modular platform designed to make animal monitoring, feeding, and activity tracking easier, safer, and more measurable, without changing your cages or racks. Each CageView module works independently or together, giving labs the flexibility to upgrade their existing infrastructure at their own pace.

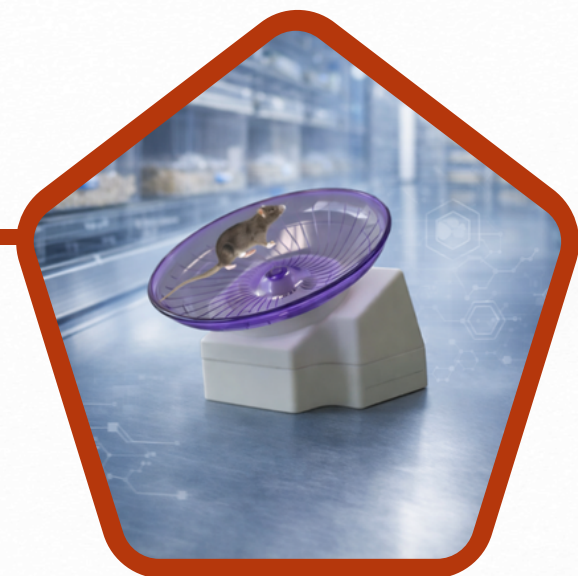

SmartVision

Remote activity monitoring that reduces lab visits and provides continuous, objective behavioral insights, directly from your existing cages.

SmartFeeder

Automated feeding and fasting schedules with full history and remote control, improving protocol compliance and reducing manual intervention.

Mousercise

Automated exercise and activity tracking that captures movement patterns, trends, and circadian behavior without constant observation.

Together, the CageView modules create a unified monitoring environment that supports better science, safer workflows, and more efficient use of staff time — all accessible remotely through a single software platform.
